

## Miscellaneous Definitions:

<b>WPS</b>	<b>Workers' Protection Standard</b>	Federal Regulations Effective January 1, 1995.
<b>PPE</b>	<b>Personal Protective Equipment</b>	Equipment to be worn as indicated by the label or WPS.
<b>REI</b>	<b>Restricted-Entry Intervals</b>	Time periods when entry into treated fields is restricted.

Dear Customer:

When you tell us to apply pesticides on your farm, we must give you certain information about the products we use and the REI rules. These pages will provide you with this information on the products we apply. You can also use this information to prepare to do your own application of pesticides.

We must all abide by the product label, as "the label is the law." According to regulations, it is your responsibility to notify any employees to stay out of affected fields during the REI, whether you spray or we spray. Oral notification will usually be sufficient. However, when certain products are applied, signs must also be posted. The "NOTIFY" column details the specific rules for each product.

**When you request custom application work, please be sure to tell us of any pesticides that have been applied to the fields we will be on or near. This will enable our employees to more fully comply with WPS.**

Pesticide labels specify certain PPE to be worn by pesticide applicators and other handlers. Labels also specify PPE to be worn by anyone entering a field during the REI. When two or more pesticides are applied together, you must follow the most restrictive label. These pages will supply this information to you. We must follow the label, however, there are situations where exceptions to the prescribed PPE are allowed. Please note the exceptions, as follows:

- ♦ When using a closed system to mix and load pesticides with the signal word **CAUTION**, handlers need only wear at least A (long-sleeve shirt and long pants) and F (shoes and socks). When the signal word is **WARNING** or **DANGER**, handlers need only wear at least A and F, appropriate gloves, and a chemical resistant apron when loading or cleaning. (Note: If the closed system is operated by pressure, handlers must add protective eyewear.)
- ♦ When an applicator works inside a closed cab, s/he needs to wear A and F. However, if the label specifies a respirator be worn, s/he must wear a respirator unless the cab provides respiratory protection.
- ♦ When a pesticide product has been incorporated or injected into the soil, a worker can enter the field during the REI without PPE immediately after application, as long as the worker is not doing tasks that involve touching or disrupting the soil subsurface.

**PLEASE KEEP THESE PAGES AVAILABLE.**

NOTES
♦ Using a closed system to load chemicals may permit less restrictive PPE when mixing and loading.
♦ Soil incorporated chemicals or operating within a closed cab may permit less restrictive PPE during REI.
♦ A chemical-resistant suit may be worn instead of coveralls and any required inner layer of clothing.
♦ If a chemical-resistant suit is worn, no apron is required.
♦ If the label calls for protective eyewear, at least a pint of eyeflush must be available.
